WL559 Wireless N Repeater

Resource CD

Easy Start Guide

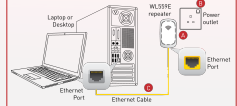

Ethernet Cable (RJ45)

STEP 1 Hardware Setup

- 1 Plug in the WL559E repeater to the power outlet.
- 2 Switch on the power outlet.
- 3 Connect the ethernet cable to the WL559E repeater and to the computer.

Important: Please turn-off / disable any wireless client on your computer before you proceed with Step 1

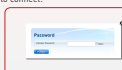

STEP 2 Connecting the WL559E to the Wireless Network

- 1 Launch the internet browser from your computer. You will be redirected to the WL559E repeater's user interface. (If in any case it doesn't, type <http://10.0.10.254> in your internet browser and then hit Enter.

- 2 Choose SSID (Wireless Network Name) from the list and click **+** to connect.

- 3 Input the Wireless Password for the network and click on Apply.

STEP 3 Place the WL559E Repeater Between Wireless Router and the Blind Spot

The WL559E repeater will connect to the wireless network and will redirect to the user interface with the following status.

- 1 Disconnect the ethernet cable from the computer and the WL559E repeater.
- 2 Place the WL559E repeater between the wireless router and the blind spot.

Remember and identify the status in your house where the wireless repeater from your router would be used to re-broadcast signal. Place the WL559E repeater between the wireless router and the spot of your wireless signal. It is ideal for the WL559E repeater to be placed in a location, where it can receive good wireless signal from the wireless router.

STEP 4 Connect Your Wireless Devices to the Repeater

- 1 Connect your wireless devices to the WL559E repeater's wireless network.

Throughput vs Wireless Coverage

Wireless Network and Throughput may vary according to the number of wireless clients that are in use at the same time. After using wireless devices, wireless signal, loading condition and other factors may vary.
